PreFixx® Protective Finish Chemical & Disinfectant Resistance

Subject:

Guidance for disinfecting OMNOVA Coated Fabric products, approved disinfectants and testing protocol.

Summary:

OMNOVA manufactures a variety of **PreFixx** Coated Fabrics sold under brands such as **Boltaflex®** and **Nautolex®**.

Testing Protocol:

OMNOVA utilizes the CFFA-100, Accelerated Exposure to Disinfectants to determine surface changes including, color, gloss or surface deterioration such as cracking, peeling or hardening. The test accelerates the exposure to disinfectants by puddling liquid disinfectant onto the surface and allowing it to dry in an 80° F oven. Once evaporation is complete the application is repeated for five total cycles. This test method is an industry standard and replicates real use.

Disinfectant Use:

In laboratory testing, upholstery protected with **PreFixx** finish was treated with the following disinfectants with little to no discoloration or damage to the surface of the coated fabric. Laboratory testing may not reflect actual results in the field. We recommend a water rinse after each disinfectant application.

Cleaning After Disinfection:

The following cleaners should be used with a soft cloth or damp sponge to remove chemical residue.

- Formula 409® All-Purpose spray cleaner
- Hand dishwashing soap and water

After cleaning, rinse area with clean water, then dry with a clean, lint-free cloth. Failure to remove chemical residue will cause discoloration of the coated fabric surface and could decrease the life cycle of the product.

Please see reverse side for full list of recommended disinfectants.

* All disinfectants and cleaning agents contain chemicals that degrade coated fabric upholstery to some extent. To promote a long product life, it is recommended that the PreFixx cleaning and maintenance protocol be employed regularly.

**Recommended disinfectants are only recommended when following the disinfectant manufacturer's instructions for application and inclusion in this document does not imply "fit for use." Customers should first determine if products are appropriate for use on their surfaces.
